Obsidian

4. In the window that opens, drag Obsidian to the Applications folder.

5. Open Obsidian the same way you would open any other application.

## Install Obsidian on Linux

If you use Linux, you can install Obsidian in several ways. Follow the instructions for the packaging system that you're using.

### Install Obsidian using Snap

1. Open your browser and go to [Download Obsidian](#).

2. Under **Linux**, click **Snap** to download the installation file.

3. Open a terminal and navigate to the folder where you downloaded the installation file.

4. In the terminal, run the following command to install the Snap package: (the `--dangerous` flag is required because Canonical, the company who created Snap, didn't review our package, the `--classic` flag allows Obsidian to access outside of the sandbox, where your notes are stored)

5. Open Obsidian the same way you would open any other application.

```
snap install obsidian-<version>_<arch>.snap --dangerous --classic
```

### Install Obsidian using AppImage

1. Open your browser and go to [Download Obsidian](#).

2. Under **Linux**, click **AppImage** to download the installation file.

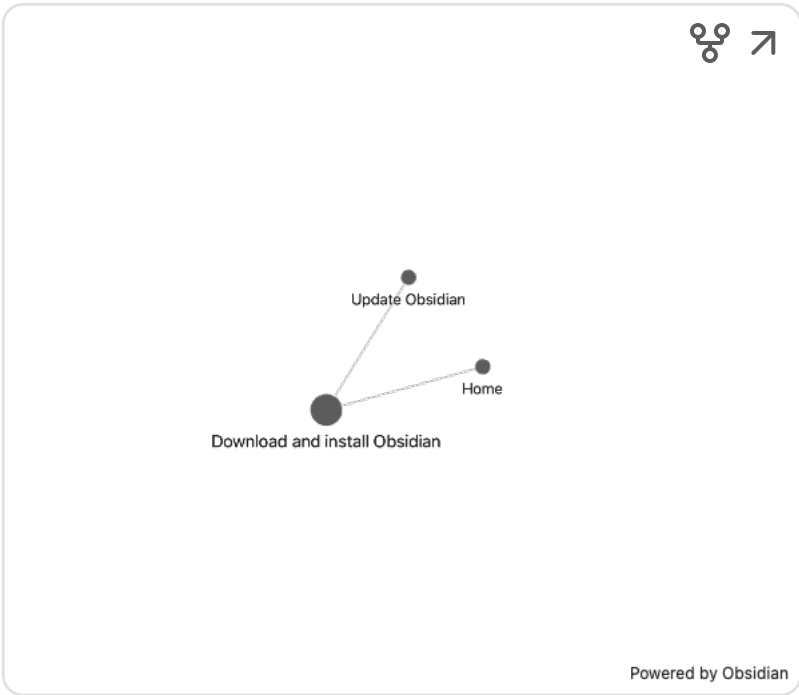

3. Open a terminal and navigate to the folder where you downloaded the installation file.

4. In the terminal, run the following command to open Obsidian:
- ```
chmod u+x Obsidian-<version>.AppImage
./Obsidian-<version>.AppImage --no-sandbox
```
- Note: On Chromebooks, the `libnss3-dev` package must be installed or you may receive the error `error while loading shared libraries: libnss3.so: cannot open shared object file: No such file or directory`.

### Install Obsidian using Flatpak

1. In your terminal, run the following command to install Obsidian:
